

The Digitalized ABLE Kit

מבדק ABLE

The ABLE Kit: changes and adaptations

The ABLE KIT was designed to assess and evaluate basic reading skills and build intervention programs based on the results of mapping students' specific skills. As of the 2021-2022 school year, the ABLE KIT is digitalized and available to all elementary school teachers on the MOE Moodle. It will no longer be sent to elementary schools throughout the country.

The kit comprises two sections:

The screening tool - to be administered to the whole class at the end of 4th grade or during the beginning months of 5th grade.

The diagnostic tool - to be administered, following the screening tool, to those students who received low scores on sections of the screening tool, or those students who have inconsistent scores.

The teacher's guide includes copies of the screening and diagnostic tool, as well as important information about the teaching of reading. It can be accessed here: [ABLE Teacher's Guide](#).
