**THE HEALTHY WAY**

by Stan Wheeler

If you ask most American children how they get to school they will probably answer, "My parents drive me," or "I take the bus." In the past, more than half of all children walked or rode bicycles to school, compared to 15% today. Dr. Tracy Miller, a public health expert, is worried that this change contributes to a major problem: American children are not getting enough exercise.

To help solve this problem Dr. Miller has developed a program called "The Healthy Way to School". The program aims at encouraging children to walk or ride bicycles to school. However, Dr. Miller knows that the success of her program depends on overcoming parents' objections.

Most parents are aware of the benefits of walking or bicycling to school, but they are concerned about safety. Parents refuse to let their children ride their bicycles in traffic for fear they might get hurt. Many parents are also unwilling to let their children walk to school alone because they are afraid that strangers might harm them.

In answer to these concerns, Dr. Miller is working on a number of ways to improve the safety of children on the way to school. So far, she has convinced several mayors to build bicycle paths in their cities. In addition, she is organizing groups of parents and teachers to walk with children to and from school.

However, there are other reasons why parents drive children to school. "Many parents say that is the only time they see their children during the day," says Dr. Miller. "We tell them that walking to school is a much better way to spend time with their children." Parents also claim that driving saves time in the morning. Dr. Miller argues that this consideration is less important than children's health.

Dr. Miller is certain that once parents learn about her program, they will change their attitude. She believes that they'll be convinced of the benefits of her program, and understand that the healthy way is now also the safe way.
